

This comment came to me and I wanted to make sure it gets into the docket for this guidance.

Thanks,  
Debbie

Subject: Vapor Intrusion Guidance

Debbie, ASTSWMO's Site Evaluation Focus Group has reviewed the draft guidance and do not believe there is a need for formal comments, especially given that you all consider this a work in progress on a still developing issue. Just wanted to let you know I did hear one informal comment regarding

Appendix A, in that analytical methods for mercury should be included with the VOCs. I know the document is directed toward VOCs, so not sure how this will fit in your ideal scope, but wanted to pass it along anyway. Thanks
